Domain description:

The domain for this visualization is Sustainable Development Goals introduced by UN in 2015. The main area is focusing on how the poorest countries in the world in 2015 have been influenced by UN's project. Therefore, there have been range of attributes related to nation's sustainable area are compared against each other to see how the specific country is impacted after 2015.

Moreover, Poverty and Hunger rates are the main topics raised in this study. The interesting trends have been found for specific countries to show which specific variables causes poverty, how food production can be useful to prevent from these issues, how country's GDP rate can be affected from poverty statistics and last but not least, how hunger rate is spread throughout the world from malnutrition variable's defined above. The final conclusion is made based on the progress of countries so far and upcoming predictions.

WHAT:

Dataset source: <https://data.worldbank.org/topic/poverty>

The dataset is obtained from world bank dataset. It is divided into seven separate sheets to make it easier to work with in tableau. There was a pivot arrangement for years in the data required as part of pre-processing.

The attributes used for each of these sheets are as below:

Quantitative attributes:

Poverty headcount ratio (in %), Prevalence of Stunting, Wasting and Underweighting rate (in %), GDP per capita, Food production index, hunger rate (in %)

Categorical Ordinal: Year of each measurement

Categorical Nominal: Indicator name/code (to select categories), Country name/code

WHY AND HOW:

1. Tree-map [2.1]

Why:

To show the top-10 countries relative comparison on the chart. The tree-map makes it easier to indicate the contribution of each country by relative percentage with others. It made it easier to select top-10 countries and then selecting one country per region of the world.

How:

Marks: The areas used for each country which is also given poverty ratio proportion

Channels: Color value used to show the proportion increase/decrease along the table,
Scalabilities used to see how each country varies in terms of area or region. Line is also used to make partition between all hierarchies.

2. Line-chart of poverty trends [2.2] Why:

Line chart shows the trend of all five chosen countries to see how poverty of the specific country varies year by year.

How:

Marks: Points on each year in series, line connection

Channels: Color hue for each country, poverty rational position, scalability

3. Stacked bar chart for Stunting, Wasting and Underweighting [2.3]

Why:

Stacked bar chart here for all three variables help comparing between countries to find which country has greater/smaller average rate compared to other ones over the years.

How:

Marks: lines(bars)

Channels: length to express quant value of percentage of stunting, wasting, underweighting rates, spatial regions, color hue for country, order by value, scalability

4. Line-chart of GDP trends [2.4]

Why: Line chart shows the trend of all five chosen countries to see how GDP per capita of the specific country varies year by year.

How:

Marks: Points on each year in series, line connection

Channels: Color hue for each country, GDP rate position, scalability

5. Area chart for food production [2.5]

Why: To analyze trend over time for food production

How:

Marks: areas of production index

Channels: Height of areas to express the index value, color hue for countries

The interactive feature is used between tree-map and the map where it will be useful to see the connection between poverty rate and hunger distribution for each country.

6. Choropleth map Hunger distribution [2.6]

Why: To show the overall hunger distribution of the world after UN project

How:

Marks: Geometric countries/region

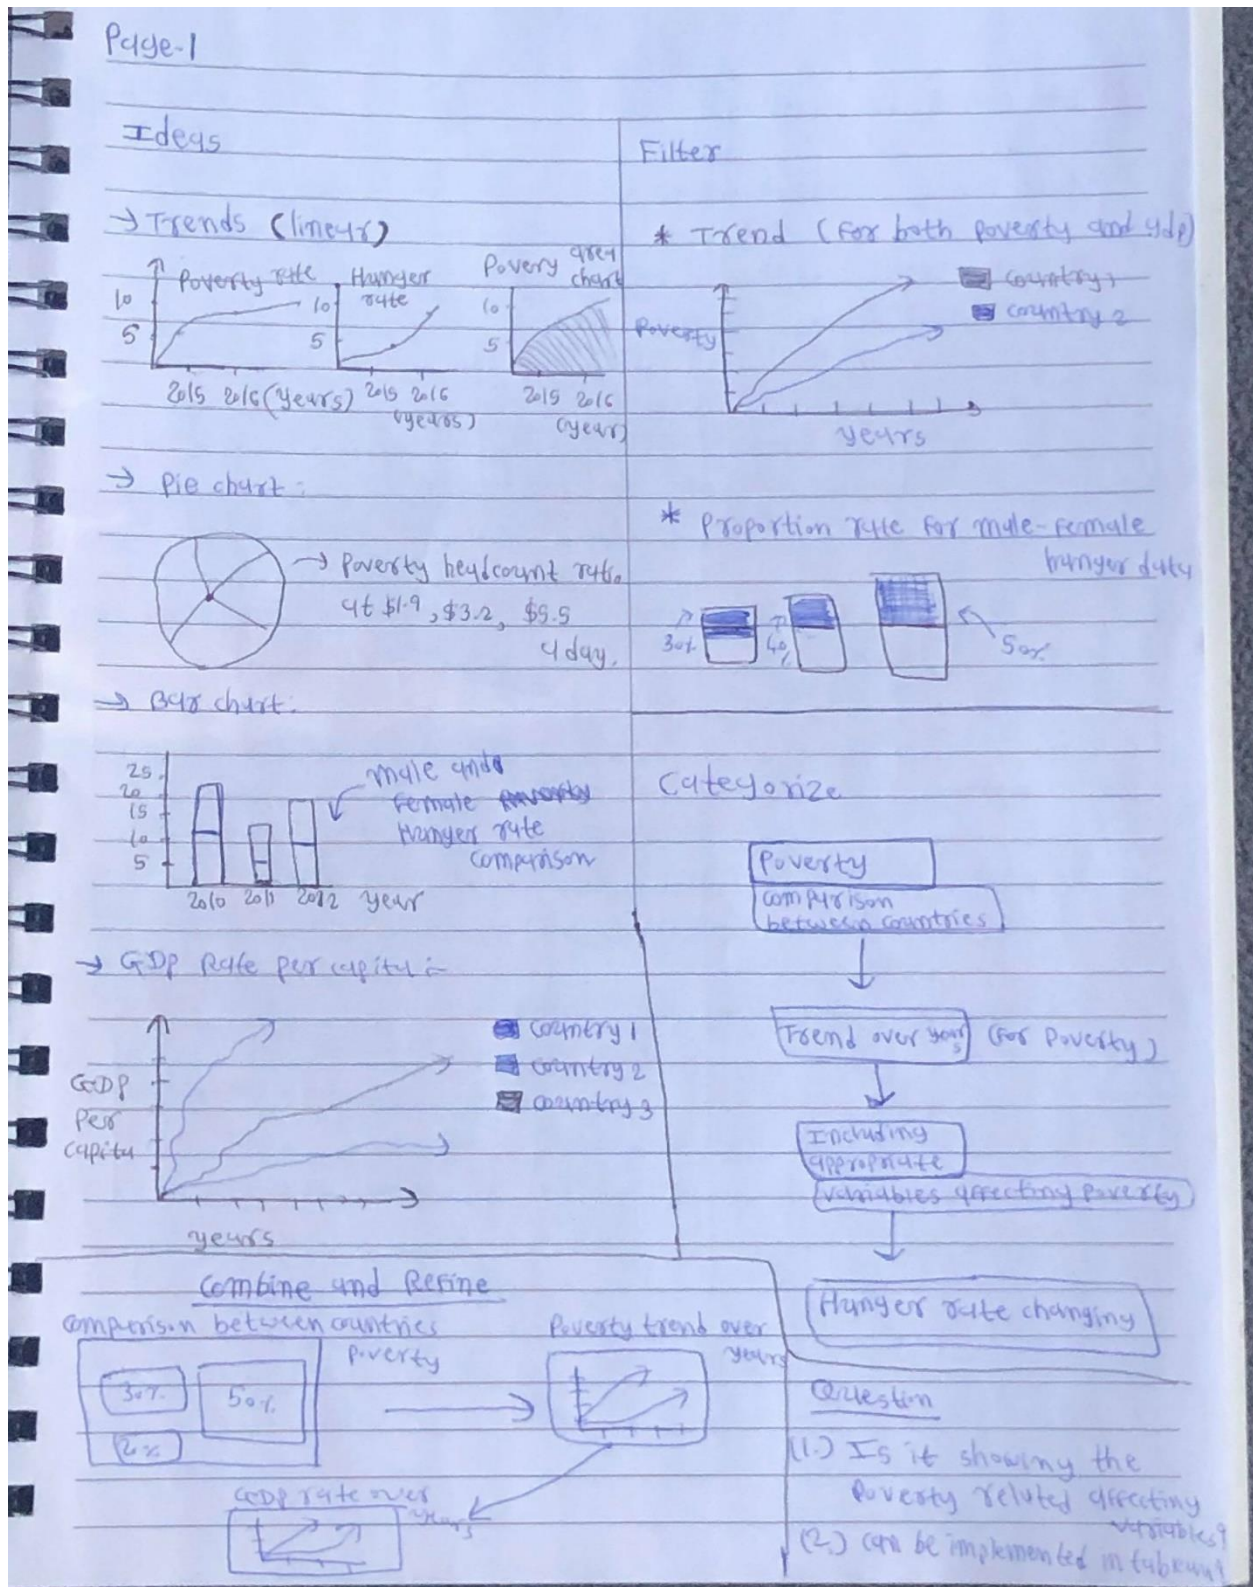

Channels: Color value to show scale

Layout

→ Poverty affecting Hunger Visualisation

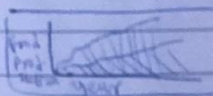

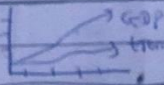

Title: Full view with graphs

Author: Uttkarsh Patel

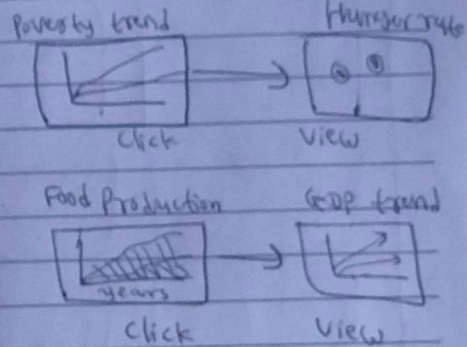

Date: 13/9/20

Sheet: 3

Task: Poverty affecting Hunger

UN SDG Goals introduce	How Poverty and hunger been an issue	Countries (in 2015) compared by Poverty
	Trend of food production	Possible steps taken by UN to achieve goals
Greater production and GDP effect		As a result, hunger rates are shown
		

Operations:

Focus

Discussion

General Information	Poverty Hunger issues	Countries compared by Poverty
Food production	Information on UN approach	
GDP effect Information	GDP trend	Information map

→ Is Food production necessary?

→ Is it the only reason for GDP growth/loss?

→ What is the better way to find poverty and hunger connection apart from food production?
